# iPassConnect PDA WINDOWS CE® & POCKET PC

SECURE GLOBAL REMOTE ACCESS TO EMAIL AND CORPORATE RESOURCES FOR WINDOWS CE AND POCKET PC

iPass™ is the first in the industry to enable mobile professionals to securely connect to corporate resources from anywhere in the world with their PDAs, including Pocket PC, Windows CE®, and Palm OS® devices. With VPN-compatible iPassConnect™ PDA, remote users can easily connect to corporate applications and email, update their calendars, and access CRM or other business systems through a single hand-held device.

## COST-EFFECTIVE GLOBAL REACH

iPass is also the first to support PDA users with a global dial-up network of over 14,000 dial-up points in 150 countries. Users can store up to 1,000 dial-up numbers at a time on their Pocket PC. Before traveling, the user selects local access numbers from the main iPass phonebook on their host PC and transfers them to their handheld during a routine synchronization process.

iPassConnect PDA also helps corporate users stay connected – overcoming wireless service challenges like limited coverage and high air-time costs. iPassConnect PDA enables the user to connect virtually anywhere with a local call, at data rates that are typically double those available from wireless carriers.

## DESIGNED FOR CORPORATE-LEVEL SECURITY

Corporations demand secure access – and iPass has teamed with Certicom to deliver a VPN solution for handhelds that supports popular IPsec compliant VPN gateways, including Cisco™ 3000 Concentrator series.

## iPASSCONNECT PDA ENABLES GLOBAL APPLICATIONS

- Corporate Email
- News and information services
- Calendar and contact management
- Lead management and distribution
- Service dispatching, trouble tickets
- Financial management and sales data

## STREAMLINED PHONEBOOK MANAGEMENT
